Create video player like youtube android

If you have local videos stored on your Android phone, there's no shortage of ways to give them a watch. But that doesn't mean all options are created equally - these are the best video apps for Android. Before we get into it though, we need to make it clear that these are applications for viewing locally stored videos. They're not for streaming services like YouTube or Netflix. The whole point is watching videos stored on your phone, whether you've taken them with the camera or downloaded them from some place. Overall: VLC for Android (free) When it comes to video players on almost any platform, it's hard not to consider VLC. It's open source, free, and can play pretty much any kind of video file you'd throw at it. All this combined makes VLC an easy choice for the best player on Android. VLC also offers subtitle and encoded caption compatibility, as well as a media library, folder support, multi-band audio, aspect ratio adjustment, and widening. It can also stream videos over your local network. Not only is it a great video player, it's also a fully featured audio player with EQ and support for basically any audio format out there. And that makes it all free. Just take it off already. Best for Camera-Shot Video: Google Photos (free) If all you're looking to do is re-watch videos you've taken with your phone's camera, then Google Photos is the way to go. It's already a powerful tool for all your image and backup needs, but it's also great for watching videos - and even for small edits. With photos, you can watch all the videos you've taken with your camera (and many others stored locally on your device, even though supported file formats are limited), share them directly with other apps, and trim or crop clips if necessary. It's a simple but useful tool - and one you probably already have on your phone. However, if not, it is free in the Play Store. Best for casting videos: LocalCast (free, IAP varies) Watching videos on your phone is cool and all, but it's also nice to take advantage of a much bigger screen in your living room. It's a huge part of what makes Google's Chromecast such a nice thing to have, and LocalCast is the best app for a solid casting experience. Related: The best way to cast movies from Android or iPhone to your TV What makes it better than other apps? It has the best support on the device: not only does it support Chromecast, but also Apple TV, Fire TV, Sony and Samsung smart TVs, Xbox 360/one, and all other DLNA devices. That's a lot. LocalCast also includes features that support cloud streaming, so there's no need to keep storage content on your device —you can connect Drive and Dropbox to LocalCast for remote streaming. LocalCast is free to try, but uses the model to pay whatever you want with a variety of options, including \$0.99 per month, annual payment plans of \$5.50, \$6.88, \$10.67, or \$21.30. There are also several one-time payment options: \$4.92 or \$6.57. You can try by It's right here. Gone are the days when watching videos required a TV tape and video or DVD player. Today, video streaming services like Netflix, Hulu or Amazon Prime, have taken over big time. Plus, better video formats and storage solutions have popped up, and many smartphones are now shooting 4K video so you can turn your mobile device into a portable theater. If your device's stock video player doesn't play properly in high-quality videos, there are some Android video player apps you can replace it with. These video player apps let you get the features you need and improve your video viewing experience. The best Android AllCast AllCast video players is an Android video player app that works with streaming devices like Chromecast, Apple TV, Roku, Xbox One/360, WDTV, and other DLNA-compliant processors. The app lets you stream content from your phone to a TV, monitor or other larger screen instead of playing it on your tiny smartphone screen. You can use AllCast to stream other types of media, such as your pictures and music from on-site storage or cloud storage. AllCast is available as a free app, with a five-minute limit for content. If you want to remove the limits, you can buy the premium key for \$4.99 and enjoy watching videos on your phone. MX Player If you want the right balance of powerful and easy to use features, MX Player is worth considering. The Android video player app supports additional formats and offers features such as accelerated hardware playback and hardware decryption. The viewer is simple and not cluttered with support for pinch-to-zoom gestures and various smooth gestures, subtitle gestures, multi-core decoding, and varying aspect ratios. MX Player also includes a children's lock to prevent your children from watching any inappropriate content. You can also use a free MX player or upgrade to a Pro version for \$5.99. VLC for Android VLC for Android is a full media player that can play any video and audio files, network drives and shares, network streams, and DVD ISOs. The app has a slew of features including equalizer and filters. VLC also supports all video formats and codecs including MOV, AVI, MP4, MKV, FLAC, Ogg, AAC, TS, Wv, and M2TS. In addition, the app supports encoded captions, subtitles, teletext, multi-band audio, automatic rotation, and gestures to control brightness, volume, and search. You can also stream video from a URL. LocalCast LocalCast is a free Android video player app that allows you to stream videos, photos, and music to devices like Chromecast, Apple TV, Roku, and Fire Stick. The app allows streaming from your device's on-site storage or cloud storage. It also supports streaming from links and most DLNA-compatible devices. If you don't like all ads in the free version, you can upgrade to pro version and unlock features like local media search and video preview. Plex If you have a lot of videos on your Android device and limited storage, Plex is a pretty good video player app to use. You can set up a server on and use Plex to stream content to your mobile device, thereby turning your device into a streaming power plant. The app also sorts your media files into a library so you can stream into your smart TV or mobile device. Plex is free to set up and use, but you can upgrade to Plex Pass membership and access features like wireless sync, media control dashboard, trailers, and user controls. BSPlayer The BSPlayer app plays the most popular video formats, supporting streaming from DLNA devices. The Video Player app includes accelerated hardware playback, multi-core hardware decryption, native subtitle support, and the ability to play files from compressed formats. Not only that, but BSPlayer also offers skating gesture support, and you can customize the interface using a variety of skins. You can also use the Pop-up Viewer to watch videos in a window above other apps on your device. The free version is supported by the app, but you can access all features. The full ad-free version offers additional functionality, including Chromecast support, multiple audio streams and subtitles, and a lock monitor (child lock). Video Player All Format Video Player All Format (XPlayer) is a basic Android video player application with 4K playback capability, ultraHD, wide format support, and Chromecast support, gesture controls. The app includes helpful extras such as playback controls that quickly vary from .25x to 4x, night mode, and gesture controls. You can also create a video playlist and add your favorite videos to it, pinch zoom, find and delete video files, or edit them using the video cutter. If you're multitasking, you can watch videos in a pop-up window, or play videos in the background when you do something else. The app is supported by add-ons, but for just \$3.99 you can unlock the version without notice and watch your videos without distractions. Kodi Kodi is a popular video streaming app that is loaded with features to help you turn your Android device into a mobile media hub. The app contains no content, but you can access videos from your on-site storage or cloud storage. Kodi also allows you to access content available on a content provider's website through third-party plugins or plugins such as YouTube, PopcornFlix, Crackle, and more. Be sure to protect your privacy with a virtual private network (VPN). VPN encrypts your data so that online snoopers and hackers won't be able to steal your personal information. Enhance your video viewing experience with the right Android video player app, you won't have to worry about downloading additional plug-ins or codecs to enjoy your favorite TV shows, music, or movies. These 8 video player apps eliminate all the gossip and get right down to play your videos. Did your favorite Android Video Player app make the list? Tell us about it in the comments. The best Android video players can turn your smartphone into a mobile theater – especially on the best big phones. And with more HD content available than ever before Many phones are now shooting 4k video - you'll want to upgrade from your phone's built-in player. This is very easy to do for Android users. Android's open architecture and app market make it easy to replace video players in stock with any of several great video apps, allowing you to get exactly the features you need. From easy-to-use players to configurable power plants, check out the best Android video player apps you can download now. The best AndroidMX Player video players (Image credit: MX Media & Entertainment)MX Player offers just the right balance between ease of use and powerful features. An unloaded viewer supports different smooth gestures and pinching to zoom in, while the app includes software and hardware decryption for a wide variety of file formats. Subtitle controls, varying aspect ratios, and screen locks are all within easy reach of the main display screen, while other changes are hidden in the settings menu. Unfortunately, due to licensing issues, support for DTS and AC3 audio is not available in the core MX Player app, which can be a transaction breaker, even though there are custom codecs available online. VLC for Android (Image Credit: Videolabs)If you are looking for a versatile, all-in-one media player that will play almost any file format you can throw at it, then give VLC for Android a spin. Outside the box, VLCcan play almost anything from MP3 and MP4 files anywhere to more unusual formats such as MKV and FLAC. In addition to playing local files, VLC for Android also supports organizing network streaming and media library, as well as advanced playback features such as multiple audio tracks and subtitles, and streaming to Chromecast.Plex (image credit: Plex)On its own, Plex is a pretty good local media player. However, combine it with Plex's server software for your desktops and mobile devices, and the app turns your mobile device into a streaming power plant, sorting your media files into a library that you can stream to your phone or smart TV. Upgrading from a free version to a full Plex Pass subscription (starting at \$4.99 monthly) adds features like a media control dashboard and user controls, trailers, and a sync wireless library, so you can enjoy your movies and music offline as well. All video player format (image credit: InShot)Any video player format (also known as XPlayer) is one of the best Android video players thanks to features such as wide format support, ultraHD and 4K playback capability and hardware and software decoding options. The app includes helpful additions, like gesture controls, variable playback speed, and Chromecast support. You can even view your videos in a pop-up window, allowing you to multitask or play videos in the background, so you can just listen when you do something else. Video Player The entire format is supported by advertisements, although you can remove advertising through an in-app purchase. Download video player all formatPlayerXtreme (Image credit: Xtreme Media Also starting with iOS video player is thought to have since made the leap to Android devices, delivering one of the best Android video players with a ton of features and options. The app supports more than 40 file formats, subtitles, and hardware acceleration. In and out streaming support allows you to view media stored on your computer, NAS, or websites, while Air Play and Chromecast support allows you to view the restrained media directly to your TV. PlayerXtreme comes with plenty of playback features, such as frame-by-frame playback, variable playback speed, changeable submarines and audio offset and subtitles if your session isn't perfectly synced. FX Player (Image Credit: FIPE Labs)FX Player provides a good balance of features, with support for a wide range of popular audio and video formats, hardware acceleration, and a pop-up player. You can also find subtitles and multi-lom support, as well as 4K playback and a variety of gesture controls, allowing you to easily adjust playback. FX Player includes network support for SMB, FTP, HTTP and CIFS and WebDAV, so you can keep your videos stored from the outside, saving space on your phone. The app is supported by ads, with banner ads on menus, and can't be purchased or subscribed within the app to remove those ads. KMPlayer (Image Credit: Pandora TV)As other best Android video players, KMPlayer supports a variety of video file formats, while offering extras like library viewer and cloud storage support. It covers a wide variety of file formats such as MP4 and MKV, including subtitle support, playback speed controls to slow down or slow down video playback, and a library view with a variety of sorting options. KMPlayer users can watch videos in window mode, as well as view content stored on Google Drive.BSPlayer (image credit: BSPlayer media)BSPlayer is a solid Android video player featuring software and hardware decoding to play the most popular video formats. This unworked video player with smooth gesture support is further enhanced by a variety of skins, allowing you to customize the interface to your liking. BSPlayer includes support for subtitled files as well as built-in subtitles in formats such as MKV. The app can even automatically find the appropriate subtitle files online. Another great feature is BSPlayer's Pop Out Viewer, which you can use to view videos in a window above your other apps. HD Video Player (Image Credit: mytechnosound)HD video player may not have a unique name, but it is one of the best Android video players for its support for 4K video playback, and plenty of easily accessible playback features. Gesture controls let you quickly adjust brightness, volume, or time search, while on-screen controls allow you to access a 10-band equal, configure playback speed, and enable night mode. Users can add an audio offset or subtitle if the session is out of sync, and users can also lock a sleep timer. In-app purchase removes banner ads from library interface and when activation is Credit: Newin)Android users fed up with wrestling with freemium apps and prominent advertising might want to try nPlayer, which does away with cumbersome humming with a one-time fee of \$4.99. nPlayer is a versatile video player that supports a wide range of media, as well as DTS and AC3 audio, as well as subtitles, multi-band audio, as well as HDMI output and streaming to Chromecast or smart TVs. Archos Video Player (Image credit: Archos)Archos didn't just build Android hardware. It also has one of the top Android video player apps in Archos Video Player. Archos Video Player supports accelerated operation of hardware in many formats and devices, and comes with plenty of advanced features. You'll find network playback support, subtitle support, and subtitle downloader. The app also offers automatic retrieval of show and movie details and poster art, as well as a visually impressive library view. If you're interested in organizing your Media Library and there's visual streaming to your video files, try Archos Video Player. Download Archos Video Player (Image Credit: Wondershare Software)The versatile Wondershare Player may not have the same advanced playback and system settings as the other best Android video players. But Wondershare supports a wide variety of file formats. It also works with subtitles, streaming video and Chromecast. In addition, Wondershare also includes discovery tools for watching videos from a variety of online sources such as TED, CNN and Funny or Die, with the option to download videos from certain sources for later viewing. Download Wondershare PlayerAllCast (Image Credit: Mechanical Mod)Instead of playing video on your tiny smartphone screen, why not stream it to a larger screen, such as a smart TV or via a streaming stick? AllCast is an Android video player designed to work with the best streaming devices such as Chromecast, Roku, Apple TV and streaming sticks and other boxes that support DLNA. Users can stream videos (with subtitle support) as well as photos, videos and music from on-site storage, as well as cloud services. The free demo comes with a 5-minute video and photo viewing limit that lets you test the app on your devices, with a premium key (\$4.99) that removes the limit. LocalCast (Image Credit: Stefan Piedl)Another great option for streaming to devices like Chromecast, Roku, and Fire TV is LocalCast, which allows you to stream videos, music, and photos. Users can stream content stored locally on their phone, or from cloud storage providers like Google Drive and Dropbox. LocalCast also supports streaming from links, as well as DLNA/UPnP connections or SMB file sharing. The app is free to use, but some features like local media search are fenced behind the in-app purchase of the Pro version (which also removes the advertising). Kodi (Image credit: XBMC) Something a little more muscular than the other good Android video players, try Kodi Media Center (formerly known as XBMC). This open source application turns your Android device into a mobile media hub, accessing locally stored content, as well as media and streams from network and internet storage. Kodi is loaded with sorting and playback features, but it also makes it more threatening to run and set up the first few times. Still, if you're willing to pry, Kodi is a powerful app in media center with a wealthy developer and user community. Community.
